PROFESSIONAL SUMMARY

Full Stack Developer with hands-on experience building production-grade web applications and integrating ML models into real-world systems. Proficient in end-to-end development across Python, JavaScript, and Java stacks. Designed and deployed AI-powered applications including a student performance predictor and a real-time attention monitoring system. Strong foundation in REST API design, database management, and client-server architecture.

TECHNICAL SKILLS

Language: Java, Python

Frontend: HTML, CSS, JavaScript, React.js

Backend: Django, Flask, REST API's

Database: MySQL, MongoDB, SQLite

Libraries: pandas, NumPy, Sci-learn, OpenCV, Media Pipe

Tools: Git, GitHub and Operating System ubuntu (Linux)

PROJECTS

Skill Boost – Student Performance Prediction System |

Feb 2026 – Mar 2026

Django · Scikit-learn · Random Forest · MySQL

- Architected a full-stack Django web app to predict student academic outcomes from behavioural and academic input features.
- Trained and benchmarked Random Forest, Logistic Regression, and Gradient Boosting models; selected Random Forest based on highest F1-score across three performance classes.
- Built an interactive dashboard surfacing per-student predictions with trend analytics and actionable improvement suggestions.

Focus Guardian – AI-Based Study Monitoring System |

March 2026

Python · OpenCV · Media Pipe · Flask · SQLite

- Engineered a real-time webcam-based monitoring tool using Media Pipe face mesh to detect head orientation and classify user attention has Focused or Distracted with sub-second latency.
- Developed a Flask REST backend persisting session data to SQLite; built an analytics dashboard to visualize focus trends and session history.

Language-Agnostic AI Chatbot |

Aug 2024 – Oct 2024

Python · NLP · REST APIs · Smart India Hackathon

- Co-developed a multilingual chatbot leveraging NLP techniques and external language APIs to handle queries across five languages with context-aware responses.
- Collaborated in a cross-functional team to design intent-classification logic; conducted systematic testing under hackathon constraints.

CERTIFICATIONS & ACHIEVEMENTS

- Oracle Cloud Infrastructure AI Foundations – Level 1 (Oracle)
- Data Structures & Algorithms using Python (Infosys Springboard)
- Java Programming & SQL for Beginners (Scaler)
- Smart India Hackathon – Internal Round Participant (Ministry of Education, Government of India)

EDUCATION

Bachelor of Computer Applications (BCA) Institute of Technology & Management, Gwalior

2024 – Present

Class XII — Shanti Public School, Datia

Year 2023
